Automation Applications Engineer

About Us: Here at Mitsubishi Electric, we pride ourselves in delivering innovative, high performing and competitive systems with low running costs and reduced carbon emissions. Our versatile product range is driven by advanced technology to meet the latest legislation and regulations - all designed specifically with our customers in mind. We at Mitsubishi Electric Ireland are looking to hire a Automation Applications Engineer to work as part of the Irish Automation Team in delivering application and software support to our partners and customers working in various industries such as Life Sciences, Consumer Packaged Goods, Food, Beverage, Electronics, Water & Waste Water Treatment and Process. Also to work on internal development projects and they arise in order to add solutions to our offering to the Irish market.

Job Title: Automation Applications Engineer

Responsibilities:

- Provide comprehensive software application support to our Irish automation partners and our customers aiding them to solve automation challenges and projects.
- Interact closely with the Mitsubishi Electric Ireland branch members and become a core part of the team.
- Develop internal "canned" solutions for the Irish market based on the needs and strategy for the Irish Business Unit
- Look out for opportunities to grow our customer base by understanding the various industrial automation challenges and how our technologies could solve them, applying your working knowledge to everyday problems.
- Ensure knowledge is kept to a high standard by keeping abreast of the latest products and associated software.
- Provide feedback to Mitsubishi Electric Europe Product Management on improvements, functions and features that could be improved or developed based on user experience.
- Provide software support pre and post sales, seeing projects through from concept stage to final commissioning, either directly to the End User or by supporting our system integrator partner network.
- Build up and grow automation knowledge in order to further develop your career and to easily solve various automation challenges in the area of PLCs, HMIs, SCADA, A.I., ANALYTICS, VSD, SERVO, ROBOTICS and ENERGY measurement.

Benefits:

There is an excellent salary and benefits package on offer, as well as a great supportive team who encourage and support your career development, health insurance, social club, pension and wellness program.
